

Example: Study Hours vs GPA

Given $r = 0.62$, $n = 20$, $df = 18$.

- $t = 0.62\sqrt{18}/\sqrt{1-0.62^2} \approx 3.33$.
- Critical $t_{\{0.025, 18\}} \approx 2.10 \Rightarrow \text{reject } H_0$.
