

Example: Response Times

Sample sizes $n_1=8$, $n_2=10$. After ranking, $R_1=70.5 \Rightarrow U_1 = 8 \cdot 10$

$+ \quad 8 \cdot 9 / 2 \quad - \quad 70.5 \quad = \quad 11.5.$ Compare to critical U at
 $\alpha = 0.05 \Rightarrow$
reject.
